

10th edition

Chemical Principles in the Laboratory

Emil J. Slowinski
Wayne C. Wolsey
Robert C. Rossi

**International
Edition**

Contents

Experiment 1

The Densities of Liquids and Solids 1

Experiment 2

Resolution of Matter into Pure Substances, I. Paper Chromatography 7

Experiment 3

Resolution of Matter into Pure Substances, II. Fractional Crystallization 15

Experiment 4

Determination of a Chemical Formula 23

Experiment 5

Identification of a Compound by Mass Relationships 29

Experiment 6

Properties of Hydrates 35

Experiment 7

Analysis of an Unknown Chloride 41

Experiment 8

Verifying the Absolute Zero of Temperature—Determination of the Barometric Pressure 47

Experiment 9

Molar Mass of a Volatile Liquid 55

Experiment 10

Analysis of an Aluminum-Zinc Alloy 61

Experiment 11

The Atomic Spectrum of Hydrogen 69

Experiment 12

The Alkaline Earths and the Halogens—Two Families in the Periodic Table 79

Experiment 13

The Geometrical Structure of Molecules—An Experiment Using Molecular Models 87

Experiment 14

Heat Effects and Calorimetry 97

Experiment 15

The Vapor Pressure and Heat of Vaporization of a Liquid 105

Experiment 16

The Structure of Crystals—An Experiment Using Models 113

Experiment 17

Classification of Chemical Substances 125

Experiment 18

Some Nonmetals and Their Compounds—Preparations and Properties 133

Experiment 19

Molar Mass Determination by Depression of the Freezing Point 141

Experiment 20

Rates of Chemical Reactions, I. The Iodination of Acetone 149

Experiment 21

Rates of Chemical Reactions, II. A Clock Reaction 159

Experiment 22

Properties of Systems in Chemical Equilibrium—Le Chatelier's Principle 169

Experiment 23

Determination of the Equilibrium Constant for a Chemical Reaction 181

Experiment 24

The Standardization of a Basic Solution and the Determination of the Molar Mass of an Acid 191

Experiment 25

pH Measurements—Buffers and Their Properties 199

Experiment 26

Determination of the Solubility Product of $\text{Ba}(\text{IO}_3)_2$ 209

Experiment 27

Relative Stabilities of Complex Ions and Precipitates Prepared from Solutions of Copper(II) 217

Experiment 28

Determination of the Hardness of Water 225

Experiment 29	
Synthesis and Analysis of a Coordination Compound	231
Experiment 30	
Determination of Iron by Reaction with Permanganate—A Redox Titration	241
Experiment 31	
Determination of an Equivalent Mass by Electrolysis	247
Experiment 32	
Voltaic Cell Measurements	255
Experiment 33	
Preparation of Copper(II) Chloride	265
Experiment 34	
Development of a Scheme for Qualitative Analysis	271
Experiment 35	
Spot Tests for Some Common Anions	277
Experiment 36	
Qualitative Analysis of Group I Cations	285
Experiment 37	
Qualitative Analysis of Group II Cations	293
Experiment 38	
Qualitative Analysis of Group III Cations	301
Experiment 39	
Identification of a Pure Ionic Solid	309
Experiment 40	
The Ten Test Tube Mystery	317
Experiment 41	
Preparation of Aspirin	325
Experiment 42	
Rate Studies on the Decomposition of Aspirin	333
Experiment 43	
Analysis for Vitamin C	341

Appendix I

Vapor Pressure and Density of Liquid Water 347

Appendix II

Summary of Solubility Properties of Ions and Solids 349

Appendix IIA

Some Properties of the Cations in Groups I, II, and III 351

Appendix III

Table of Atomic Masses (Based on Carbon-12) 355

Appendix IV

Making Measurements—Laboratory Techniques 357

Appendix V

Mathematical Considerations—Significant Figures and Making Graphs 367

Appendix VI

Suggested Locker Equipment 373

Appendix VII

Introduction to Excel 375

Appendix VIII

Statistical Treatment of Laboratory Data 379
