

EDITOR: DAN B. MARGHITU

MECHANICAL ENGINEER'S HANDBOOK

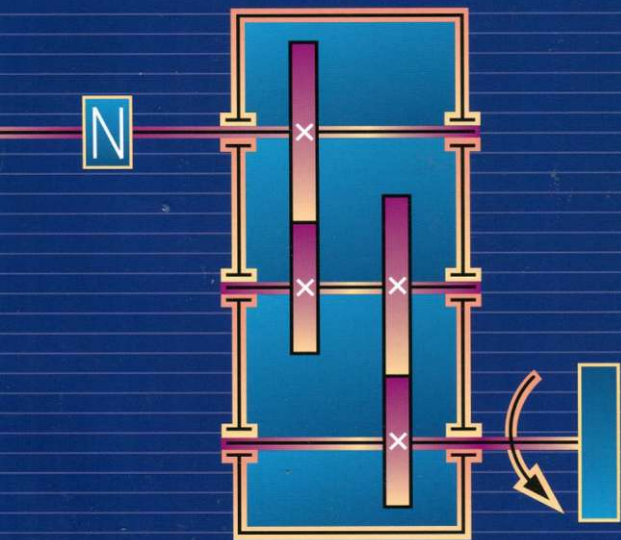

Table of Contents

<i>Preface</i>	xiii
<i>Contributors</i>	xv
<i>Statics</i>	
Dan B. Marghitu, Cristian I. Diaconescu, and Bogdan O. Ciocirlan	
7. <i>Vector Algebra</i>	2
1.1 Terminology and Notation.	2
1.2 Equality.	4
1.3 Product of a Vector and a Scalar.	4
1.4 Zero Vectors.	4
1.5 Unit Vectors.	4
1.6 Vector Addition.	5
1.7 Resolution of Vectors and Components.	6
1.8 Angle between Two Vectors.	7
1.9 Scalar (Dot) Product of Vectors.	9
1.10 Vector (Cross) Product of Vectors.	9
1.11 Scalar Triple Product of Three Vectors.	11
1.12 Vector Triple Product of Three Vectors.	11
1.13 Derivative of a Vector.	12
2. <i>Centroids and Surface Properties</i>	12
2.1 Position Vector.	12
2.2 First Moment.	13
2.3 Centroid of a Set of Points.	13
2.4 Centroid of a Curve, Surface, or Solid.	15
2.5 Mass Center of a Set of Particles.	16
2.6 Mass Center of a Curve, Surface, or Solid.	16
2.7 First Moment of an Area.	17
2.8 Theorems of Guldinus-Pappus.	21
2.9 Second Moments and the Product of Area.	24
2.10 Transfer Theorem or Parallel-Axis Theorems.	25
2.11 Polar Moment of Area.	27
2.12 Principal Axes.	28
3. <i>Moments and Couples</i>	30
3.1 Moment of a Bound Vector about a Point.	30
3.2 Moment of a Bound Vector about a Line.	31
3.3 Moments of a System of Bound Vectors.	32
3.4 Couples.	34

3.5	Equivalence.	35
3.6	Representing Systems by Equivalent Systems.	36
4.	<i>Equilibrium.</i>	40
4.1	Equilibrium Equations.	40
4.2	Supports.	42
4.3	Free-Body Diagrams.	44
5.	<i>Dry Friction.</i>	46
5.1	Static Coefficient of Friction.	47
5.2	Kinetic Coefficient of Friction.	47
5.3	Angles of Friction.	48
	<i>References.</i>	49

Dynamics

Dan B. Marghitu, Bogdan O. Ciocirlan, and Cristian I. Diaconescu

7.	<i>Fundamentals.</i>	52
1.1	Space and Time.	52
1.2	Numbers.	52
1.3	Angular Units.	53
2.	<i>Kinematics of a Point.</i>	54
2.1	Position, Velocity, and Acceleration of a Point.	54
2.2	Angular Motion of a Line.	55
2.3	Rotating Unit Vector.	56
2.4	Straight Line Motion.	57
2.5	Curvilinear Motion.	58
2.6	Normal and Tangential Components.	59
2.7	Relative Motion.	73
3.	<i>Dynamics of a Particle.</i>	74
3.1	Newton's Second Law.	74
3.2	Newtonian Gravitation.	75
3.3	Inertial Reference Frames.	75
3.4	Cartesian Coordinates.	76
3.5	Normal and Tangential Components.	77
3.6	Polar and Cylindrical Coordinates.	78
3.7	Principle of Work and Energy.	80
3.8	Work and Power.	81
3.9	Conservation of Energy.	84
3.10	Conservative Forces.	85
3.11	Principle of Impulse and Momentum.	87
3.12	Conservation of Linear Momentum.	89
3.13	Impact.	90
3.14	Principle of Angular Impulse and Momentum.	94
4.	<i>Planar Kinematics of a Rigid Body.</i>	95
4.1	Types of Motion.	95
4.2	Rotation about a Fixed Axis.	96
4.3	Relative Velocity of Two Points of the Rigid Body.	97
4.4	Angular Velocity Vector of a Rigid Body.	98
4.5	Instantaneous Center.	100
4.6	Relative Acceleration of Two Points of the Rigid Body.	102

4.7 Motion of a Point That Moves Relative to a Rigid Body. 103

5. *Dynamics of a Rigid Body*.....111

5.1 Equation of Motion for the Center of Mass.....111

5.2 Angular Momentum Principle for a System of Particles. 113

5.3 Equation of Motion for General Planar Motion. 115

5.4 D'Alembert's Principle. 117

References. 117

Mechanics of Materials

Dan B. Marghitu, Cristian I. Diaconescu, and Bogdan O. Ciocirlan

7. Stress. 120

1.1 Uniformly Distributed Stresses. 120

1.2 Stress Components. 120

1.3 Mohr's Circle. 121

1.4 Triaxial Stress. 125

1.5 Elastic Strain. 127

1.6 Equilibrium. 128

1.7 Shear and Moment. 131

1.8 Singularity Functions. 132

1.9 Normal Stress in Flexure. 135

1.10 Beams with Asymmetrical Sections. 139

1.11 Shear Stresses in Beams. 140

1.12 Shear Stresses in Rectangular Section Beams. 142

1.13 Torsion. 143

1.14 Contact Stresses. 147

2. *Deflection and Stiffness*. 149

2.1 Springs. 150

2.2 Spring Rates for Tension, Compression, and Torsion. 150

2.3 Deflection Analysis. 152

2.4 Deflections Analysis Using Singularity Functions. 153

2.5 Impact Analysis. 157

2.6 Strain Energy. 160

2.7 Castigliano's Theorem. 163

2.8 Compression. 165

2.9 Long Columns with Central Loading. 165

2.10 Intermediate-Length Columns with Central Loading. 169

2.11 Columns with Eccentric Loading. 170

2.12 Short Compression Members. 171

3. *Fatigue*. 173

3.1 Endurance Limit. 173

3.2 Fluctuating Stresses. 178

3.3 Constant Life Fatigue Diagram. 178

3.4 Fatigue Life for Randomly Varying Loads. 181

3.5 Criteria of Failure. 183

References. 187

Theory of Mechanisms

Dan B. Marghitu

1. <i>Fundamentals</i>	190
1.1 Motions	190
1.2 Mobility	190
1.3 Kinematic Pairs	191
1.4 Number of Degrees of Freedom	199
1.5 Planar Mechanisms	200
2. <i>Position Analysis</i>	202
2.1 Cartesian Method	202
2.2 Vector Loop Method	208
3. <i>Velocity and Acceleration Analysis</i>	211
3.1 Driver Link	212
3.2 RRR Dyad	212
3.3 KKT Dyad	214
3.4 RTRDyad	215
3.5 TRT Dyad	216
4. <i>Kinetostatics</i>	223
4.1 Moment of a Force about a Point	223
4.2 Inertia Force and Inertia Moment	224
4.3 Free-Body Diagrams	227
4.4 Reaction Forces	228
4.5 Contour Method	229
References	241

CHAPTER 5 *Machine Components*

Dan B. Marghitu, Cristian I. Diaconescu, and Nicolae Craciunoiu

1. <i>Screws</i>	244
1.1 Screw Thread	244
1.2 Power Screws	247
2. <i>Gears</i>	253
2.1 Introduction	253
2.2 Geometry and Nomenclature	253
2.3 Interference and Contact Ratio	258
2.4 Ordinary Gear Trains	261
2.5 Epicyclic Gear Trains	262
2.6 Differential	267
2.7 Gear Force Analysis	270
2.8 Strength of Gear Teeth	275
3. <i>Springs</i>	283
3.1 Introduction	283
3.2 Material for Springs	283
3.3 Helical Extension Springs	284
3.4 Helical Compression Springs	284
3.5 Torsion Springs	290
3.6 Torsion Bar Springs	292
3.7 Multileaf Springs	293
3.8 Belleville Springs	296

4. <i>Rolling Bearings</i>	297
4.1 Generalities	297
4.2 Classification	298
4.3 Geometry	298
4.4 Static Loading	303
4.5 Standard Dimensions	304
4.6 Bearing Selection	308
5. <i>Lubrication and Sliding Bearings</i>	318
5.1 Viscosity	318
5.2 Petroffs Equation	323
5.3 Hydrodynamic Lubrication Theory	326
5.4 Design Charts	328
References	336

Theory of Vibration

Dan B. Marghitu, P. K. Raju, and Dumitru Mazilu

7. <i>Introduction</i>	340
2. <i>Linear Systems with One Degree of Freedom</i>	341
2.1 Equation of Motion	342
2.2 Free Undamped Vibrations	343
2.3 Free Damped Vibrations	345
2.4 Forced Undamped Vibrations	352
2.5 Forced Damped Vibrations	359
2.6 Mechanical Impedance	369
2.7 Vibration Isolation: Transmissibility	370
2.8 Energetic Aspect of Vibration with One DOF	374
2.9 Critical Speed of Rotating Shafts	380
3. <i>Linear Systems with Finite Numbers of Degrees of Freedom</i>	385
3.1 Mechanical Models	386
3.2 Mathematical Models	392
3.3 System Model	404
3.4 Analysis of System Model	405
3.5 Approximative Methods for Natural Frequencies	407
4. <i>Machine-Tool Vibrations</i>	416
4.1 The Machine Tool as a System	416
4.2 Actuator Subsystems	418
4.3 The Elastic Subsystem of a Machine Tool	419
4.4 Elastic System of Machine-Tool Staicture	435
4.5 Subsystem of the Friction Process	437
4.6 Subsystem of Cutting Process	440
References	444

Principles of Heat Transfer

Alexandru Morega

7. <i>Heat Transfer Thermodynamics</i>	446
1.1 Physical Mechanisms of Heat Transfer: Conduction, Convection, and Radiation	451

1.2	Technical Problems of Heat Transfer.	455
2.	<i>Conduction Heat Transfer.</i>	456
2.1	The Heat Diffusion Equation.	457
2.2	Thermal Conductivity.	459
2.3	Initial, Boundary, and Interface Conditions.	461
2.4	Thermal Resistance.	463
2.5	Steady Conduction Heat Transfer.	464
2.6	Heat Transfer from Extended Surfaces (Fins).	468
2.7	Unsteady Conduction Heat Transfer.	472
3.	<i>Convection Heat Transfer.</i>	488
3.1	External Forced Convection.	488
3.2	Internal Forced Convection.	520
3.3	External Natural Convection.	535
3.4	Internal Natural Convection.	549
	<i>References.</i>	555

Fluid Dynamics

Nicolae Craciunoiu and Bogdan O. Ciocirlan

1.	<i>Fluids Fundamentals.</i>	560
1.1	Definitions.	560
1.2	Systems of Units.	560
1.3	Specific Weight.	560
1.4	Viscosity.	561
1.5	Vapor Pressure.	562
1.6	Surface Tension.	562
1.7	Capillarity.	562
1.8	Bulk Modulus of Elasticity.	562
1.9	Statics.	563
1.10	Hydrostatic Forces on Surfaces.	564
1.11	Buoyancy and Flotation.	565
1.12	Dimensional Analysis and Hydraulic Similitude.	565
1.13	Fundamentals of Fluid Flow.	568
2.	<i>Hydraulics.</i>	572
2.1	Absolute and Gage Pressure.	572
2.2	Bernoulli's Theorem.	573
2.3	Hydraulic Cylinders.	575
2.4	Pressure Intensifiers.	578
2.5	Pressure Gages.	579
2.6	Pressure Controls.	580
2.7	Flow-Limiting Controls.	592
2.8	Hydraulic Pumps.	595
2.9	Hydraulic Motors.	598
2.10	Accumulators.	601
2.11	Accumulator Sizing.	603
2.12	Fluid Power Transmitted.	604
2.13	Piston Acceleration and Deceleration.	604
2.14	Standard Hydraulic Symbols.	605
2.15	Filters.	606

2.16 Representative Hydraulic System 607
 References 610

Mircea Ivanescu

7. Introduction 612
 1.1 A Classic Example 613
 2. Signals 614
 3. Transfer Functions **616**
 3.1 Transfer Functions for Standard Elements 616
 3.2 Transfer Functions for Classic Systems 617
 4. Connection of Elements 618
 5. Poles and Zeros 620
 6. Steady-State Error 623
 6.1 Input Variation Steady-State Error 623
 6.2 Disturbance Signal Steady-State Error 624
 7. Time-Domain Performance 628
 8. Frequency-Domain Performances 631
 8.1 The Polar Plot Representation 632
 8.2 The Logarithmic Plot Representation 633
 8.3 Bandwidth 637
 9. Stability of Linear Feedback Systems 639
 9.1 The Routh-Hurwitz Criterion 640
 9.2 The Nyquist Criterion 641
 9.3 Stability by Bode Diagrams 648
 7 10. Design of Closed-Loop Control Systems by Pole-Zero Methods 649
 10.1 Standard Controllers 650
 10.2 P-Controller Performance 651
 10.3 Effects of the Supplementary Zero 656
 10.4 Effects of the Supplementary Pole 660
 10.5 Effects of Supplementary Poles and Zeros 661
 10.6 Design Example: Closed-Loop Control of a Robotic Arm 664
 7 7. Design of Closed-Loop Control Systems by Frequential Methods 669
 72. State Variable Models 672
 7 3. Nonlinear Systems 678
 13.1 Nonlinear Models: Examples 678
 13.2 Phase Plane Analysis 681
 13.3 Stability of Nonlinear Systems 685
 13.4 Liapunov's First Method 688
 13.5 Liapunov's Second Method 689
 7 4. Nonlinear Controllers by Feedback Linearization 691
 75. Sliding Control 695
 15.1 Fundamentals of Sliding Control 695
 15.2 Variable Structure Systems 700
 A. Appendix 703
 A.1 Differential Equations of Mechanical Systems 703

A.2	The Laplace Transform.	707
A.3	Mapping Contours in the s-Plane.	707
A.4	The Signal Flow Diagram.	712
	<i>References.</i>	714

Differential Equations and Systems of Differential Equations

<i>Horatiu</i>	<i>Barbulescu</i>	
1.	<i>Differential Equations.</i>	716
1.1	Ordinary Differential Equations: Introduction.	716
1.2	Integrable Types of Equations.	726
1.3	On the Existence, Uniqueness, Continuous Dependence on a Parameter, and Differentiability of Solutions of Differential Equations.	766
1.4	Linear Differential Equations.	774
2.	<i>Systems of Differential Equations.</i>	816
2.1	Fundamentals.	816
2.2	Integrating a System of Differential Equations by the Method of Elimination.	819
2.3	Finding Integrable Combinations.	823
2.4	Systems of Linear Differential Equations.	825
2.5	Systems of Linear Differential Equations with Constant Coefficients.	835
	<i>References.</i>	845
