Global Optimization

Deterministic
Approaches

Third,
Revised
and Enlarged
Edition

Springer

CONTENTS

PART A: INTRODUCTION AND BASIC TECHNIQUES	1
CHAPTER I. SOME IMPORTANT CLASSES OF GLOBAL OPTIMIZATION PROBLEMS	3
1. Global Optimization	3
2. Concave Minimization	9
2.1. Definition and Basic Properties	9
2.2. Brief Survey of Direct Applications	12
2.3. Integer Programming and Concave Minimization	14
2.4. Bilinear Programming and Concave Minimization	20
2.5. Complementarity Problems and Concave Minimization	24
2.6. Max—Min Problems and Concave Minimization	25
3. D.C. Programming and Reverse Convex Constraints	26
3.1. D.C. Programming: Basic Properties	26
3.2. D.C. Programming: Applications	32
3.3. Reverse Convex Constraints	37
3.4. Canonical D.C. Programming Problems	39
4. Lipschitzdan Optimization and Systems of Equations and Inequalities	43
4.1. Lipschitzian Optimization	43
4.2. Systems of Equations and Inequalities	47
CHAPTER II. OUTER APPROXIMATION	53
1. Basic Outer Approximation Method	53
2. Outer Approximation by Convex Polyhedral Sets	58
3. Constraint Dropping Strategies	67
4. On Solving the Subproblems (Q_k)	71
4.1. Finding an Initial Polytope D_1 and its Vertex Set	72
4.2. Computing New Vertices and New Extreme Directions	74
4.3. Identifying Redundant Constraints	84

CHAPTER III. CONCAVITY CUT	89
1. Concept of a Valid Cut	89
2. Valid Cuts in the Degenerate Case	95
3. Convergence of Cutting Procedures	99
4. Concavity Cuts for Handling Reverse Convex Constraints	104
5. A Class of Generalized Concavity Cuts	108
6. Cuts Using Negative Edge Extensions	113
CHAPTER IV. BRANCH AND BOUND	115
1. A Prototype Branch and Bound Method	115
2. Finiteness and Convergence Conditions	126
3. Typical Partition Sets and their Refinement	137
3.1. Simplices	137
3.2. Rectangles and Polyhedral Cones	142
4. Lower Bounds	145
4.1. Lipschitzian Optimization	145
4.2. Vertex Minima	146
4.3. Convex Subfunctionals	148
4.4. Duality	159
4.5. Consistency	164
5. Deletion by Infeasibility	169
6. Restart Branch and Bound Algorithm	176
PART B: CONCAVE MINIMIZATION	179
CHAPTER V. CUTTING METHODS	181
1. A Pure Cutting Algorithm	181
1.1. Valid Cuts and a Sufficient Condition for Global Optimality	182
1.2. Outline of the Method	187
2. Facial Cut Algorithm	190
2.1. The Basic Idea	190
2.2. Finding an Extreme Face of D Relative to M	192
2.3. Facial Valid Cuts	196
2.4. A Finite Cutting Algorithm	198

- 2]. **Cut and Split Algorithm**
 - 3.1. Partition of a Cone 202
 - 3.2. Outline of the Method 203
 - 3.3. Remarks 206
4. **Generating Deep Cuts: The Case of Concave Quadratic Functionals**
 - 4.1. A Hierarchy of Valid Cuts 211
 - 4.2. Konno's Cutting Method for Concave Quadratic Programming
 - 4.3. Bilinear Programming Cuts 222

CHAPTER VI. SUCCESSIVE APPROXIMATION METHODS

1. **Outer Approximation Algorithms**
 - 1.1. Linearly Constrained Problem 226
 - 1.2. Problems with Convex Constraints 234
 - 1.3. Reducing the Sizes of the Relaxed Problems 240
2. **Inner Approximation**
 - 2.1. The (DG) Problem 244
 - 2.2. The Concept of Polyhedral Annexation 245
 - 2.3. Computing the Facets of a Polytope 248
 - 2.4. A Polyhedral Annexation Algorithm 251
 - 2.5. Relations to Other Methods 261
 - 2.6. Extensions 264
3. **Convex Underestimation**
 - 3.1. Relaxation and Successive Underestimation 267
 - 3.2. The Falk and Hoffman Algorithm 269
 - 3.3. Rosen's Algorithm 273
4. **Concave Polyhedral Underestimation**
 - 4.1. Outline of the Method 278
 - 4.2. Computation of the Concave Underestimators 281
 - 4.3. Computation of the Nonvertical Facets 282
 - 4.4. Polyhedral Underestimation Algorithm 285
 - 4.5. Alternative Interpretation 287
 - 4.6. Separable Problems 289

CHAPTER VII. SUCCESSIVE PARTITION METHODS

1. **Conical Algorithms**
 - 1.1. The Normal Conical Subdivision Process 296
 - 1.2. The Main Subroutine 298
 - 1.3. Construction of Normal Subdivision Processes 300
 - 1.4. The Basic NCS Process 306
 - 1.5. The Normal Conical Algorithm 308
 - 1.6. Remarks Concerning Implementation 312
 - 1.7. Example 315
 - 1.8. Alternative Variants 319
 - 1.9. Concave Minimization with Convex Constraints 323
 - 1.10. Unbounded Feasible Domain 328

1.11. A Class of Exhaustive Subdivision Processes	329
1.12. Exhaustive Nondegenerate Subdivision Processes	335
2. Simplicial Algorithms	342
2.1. Normal Simplicial Subdivision Processes	343
2.2. Normal Simplicial Algorithm	345
2.3. Construction of an NSS Process	347
2.4. The Basic NSS Process	349
2.5. Normal Simplicial Algorithm for Problems with Convex Constraints	351
3. An Exact Simplicial Algorithm	353
3.1. Simplicial Subdivision of a Polytope	353
3.2. A Finite Branch and Bound Procedure	356
3.3. A Modified ES Algorithm	358
3.4. Unbounded Feasible Set	361
4. Rectangular Algorithms	365
4.1. Normal Rectangular Algorithm	366
4.2. Construction of an NRS Process	369
4.3. Specialization to Concave Quadratic Programming	371
4.4. Example	377
CHAPTER VIII. DECOMPOSITION OF LARGE SCALE PROBLEMS	381
1. Decomposition Framework	382
2. Branch and Bound Approach	384
2.1. Normal Simplicial Algorithm	385
2.2. Normal Rectangular Algorithm	388
2.3. Normal Conical Algorithm	390
3. Polyhedral Underestimation Method	391
3.1. Nonseparable Problems	391
3.2. Separable Problems	393
4. Decomposition by Outer Approximation	401
4.1. Basic Idea	401
4.2. Decomposition Algorithm	403
4.3. An Extension	408
4.4. Outer Approximation Versus Successive Partition	412
4.5. Outer Approximation Combined with Branch and Bound	417
5. Decomposition of Concave Minimization Problems over Networks	421
5.1. The Minimum Concave Cost Flow Problem	421
5.2. The Single Source Uncapacitated Minimum Concave Cost Flow (SUCF) Problem	426
5.3. Decomposition Method for (SUCF)	433
5.4. Extension	443

- 1. Bilinear Programming 447
 - 1.1. Basic Properties 448
 - 1.2. Cutting Plane Method 451
 - 1.3. Polyhedral Annexation 456
 - 1.4. Conical Algorithm 458
 - 1.5. Outer Approximation Method 462
- 2. Complementarity Problems 469
 - 2.1. Basic Properties 470
 - 2.2. Polyhedral Annexation Method for the Linear Complementarity Problem (LCP) 472
 - 2.3. Conical Algorithm for the (LCP) 475
 - 2.4. Other Global Optimization Approaches to (LCP) 483
 - 2.5. The Concave Complementarity Problem 486
- 3. Parametric Concave Programming 490
 - 3.1. Basic Properties 492
 - 3.2. Outer Approximation Method for (LRCP) 497
 - 3.3. Methods Based on the Edge Property 500
 - 3.4. Conical Algorithms for (LRCP) 508

PART C: GENERAL NONLINEAR PROBLEMS 517

CHAPTERX. D.C.PROGRAMMING 519

- 1. Outer Approximation Methods for Solving the Canonical D.C. Programming Problem 519
 - 1.1. Duality between the Objective and the Constraints 520
 - 1.2. Outer Approximation Algorithms for Canonical D.C. Problems 526
 - 1.3. Outer Approximation for Solving Noncanonical D.C. Problems 541
- 2. Branch and Bound Methods 553
- 3. Solving D.C. Problems by a Sequence of Linear Programs and line Searches 558
- 4. Some Special D.C. Problems and Applications 572
 - 4.1. The Design Centering Problem 572
 - 4.2. The Diamond Cutting Problem 581
 - 4.3. Biconvex Programming and Related Problems 592

CHAPTER XI. LIPSCHITZ AND CONTINUOUS OPTIMIZATION 603

- 1. Brief Introduction into the Global Minimization of Univariate Lipschitz Functions 604
 - 1.1. Saw-Tooth Covers 604

2. Branch and Bound Algorithms	616
2.1. Branch and Bound Interpretation of Piyavskii's Univariate Algorithm	617
2.2. Branch and Bound Methods for Minimizing a Lipschitz Function over an n-dimensional Rectangle	621
2.3. Branch and Bound Methods for Solving Lipschitz Optimization Problems with General Constraints	632
2.4. Global Optimization of Concave Functions Subject to Separable Quadratic Constraints	634
2.5. Linearly Constrained Global Optimization of Functions with Concave Minorants	645
3. Outer Approximation	653
4. The Relief Indicator Method	662
4.1. Separators for f on D	663
4.2. A Global Optimality Criterion	666
4.3. The Relief Indicator Method	670
