

7th Edition

Design and Analysis of Experiments

Douglas C. Montgomery

Contents

<i>Preface</i>	v
1	
<i>Introduction</i>	1
1.1 Strategy of Experimentation	1
1.2 Some Typical Applications of Experimental Design	8
1.3 Basic Principles	11
1.4 Guidelines for Designing Experiments	14
1.5 A Brief History of Statistical Design	19
1.6 Summary: Using Statistical Techniques in Experimentation	21
1.7 Problems	22
2	
<i>Simple Comparative Experiments</i>	23
2.1 Introduction	23
2.2 Basic Statistical Concepts	25
2.3 Sampling and Sampling Distributions	28
2.4 Inferences About the Differences in Means, Randomized Designs	34
2.4.1 Hypothesis Testing	34
2.4.2 Choice of Sample Size	41
2.4.3 Confidence Intervals	44
2.4.4 The Case Where $\sigma_1 = \sigma_2$	45
2.4.5 The Case Where σ_1 and σ_2 Are Known	45
2.4.6 Comparing a Single Mean to a Specified Value	46
2.4.7 Summary	47
2.5 Inferences About the Differences in Means, Paired Comparison Designs	48
2.5.1 The Paired Comparison Problem	48
2.5.2 Advantages of the Paired Comparison Design	51

2.6	Inferences About the Variances of Normal Distributions	52
2.7	Problems	55

3

	<i>Experiments with a Single Factor:</i>	
	<i>The Analysis of Variance</i>	60
3.1	An Example	61
3.2	The Analysis of Variance	63
3.3	Analysis of the Fixed Effects Model	65
3.3.1	Decomposition of the Total Sum of Squares	66
3.3.2	Statistical Analysis	68
3.3.3	Estimation of the Model Parameters	73
3.3.4	Unbalanced Data	74
3.4	Model Adequacy Checking	75
3.4.1	The Normality Assumption	75
3.4.2	Plot of Residuals in Time Sequence	77
3.4.3	Plot of Residuals Versus Fitted Values	78
3.4.4	Plots of Residuals Versus Other Variables	83
3.5	Practical Interpretation of Results	84
3.5.1	A Regression Model	84
3.5.2	Comparisons Among Treatment Means	85
3.5.3	Graphical Comparisons of Means	86
3.5.4	Contrasts	87
3.5.5	Orthogonal Contrasts	89
3.5.6	Scheffe's Method for Comparing All Contrasts	91
3.5.7	Comparing Pairs of Treatment Means	92
3.5.8	Comparing Treatment Means with a Control	96
3.6	Sample Computer Output	97
3.7	Determining Sample Size	101
3.7.1	Operating Characteristic Curves	101
3.7.2	Specifying a Standard Deviation Increase	103
3.7.3	Confidence Interval Estimation Method	104
3.8	A Real Economy Application of a Designed Experiment	105
3.9	Discovering Dispersion Effects	107
3.10	The Regression Approach to the Analysis of Variance	109
3.10.1	Least Squares Estimation of the Model Parameters	109
3.10.2	The General Regression Significance Test	110
3.11	Nonparametric Methods in the Analysis of Variance	112
3.11.1	The Kruskal-Wallis Test	112
3.11.2	General Comments on the Rank Transformation	114
3.12	Problems	114

4

	<i>Randomized Blocks, Latin Squares,</i>	
	<i>and Related Designs</i>	121
4.1	The Randomized Complete Block Design	121
4.1.1	Statistical Analysis of the RCBD	123
4.1.2	Model Adequacy Checking	131
4.1.3	Some Other Aspects of the Randomized Complete Block Design	132
4.1.4	Estimating Model Parameters and the General Regression Significance Test	135

4.2	The Latin Square Design	138
4.3	The Graeco-Latin Square Design	145
4.4	Balanced Incomplete Block Designs	148
4.4.1	Statistical Analysis of the BIBD	148
4.4.2	Least Squares Estimation of the Parameters	152
4.4.3	Recovery of Interblock Information in the BIBD	154
4.5	Problems	157

5

Introduction to Factorial Designs 162

5.1	Basic Definitions and Principles	162
5.2	The Advantage of Factorials	165
5.3	The Two-Factor Factorial Design	166
5.3.1	An Example	166
5.3.2	Statistical Analysis of the Fixed Effects Model	168
5.3.3	Model Adequacy Checking	177
5.3.4	Estimating the Model Parameters	177
5.3.5	Choice of Sample Size	180
5.3.6	The Assumption of No Interaction in a Two-Factor Model	181
5.3.7	One Observation per Cell	182
5.4	The General Factorial Design	185
5.5	Fitting Response Curves and Surfaces	190
5.6	Blocking in a Factorial Design	198
5.7	Problems	202

6

The 2^k Factorial Design 207

6.1	Introduction	207
6.2	The 2^2 Design	208
6.3	The 2^3 Design	215
6.4	The General 2^k Design	227
6.5	A Single Replicate of the 2^k Design	229
6.6	Additional Examples of Unreplicated 2^k Design	243
6.7	2^k Designs are Optimal Designs	252
6.8	The Addition of Center Points to the 2^k Design	257
6.9	Why We Work with Coded Design Variables	261
6.10	Problems	264

7

Blocking and Confounding in the 2^k Factorial Design 273

7.1	Introduction	273
7.2	Blocking a Replicated 2^k Factorial Design	274
7.3	Confounding in the 2^k Factorial Design	275
7.4	Confounding the 2^k Factorial Design in Two Blocks	275
7.5	Another Illustration of Why Blocking Is Important	281
7.6	Confounding the 2^k Factorial Design in Four Blocks	282
7.7	Confounding the 2^k Factorial Design in 2^p Blocks	284

7.8	Partial Confounding	285
7.9	Problems	288

8

Two-Level Fractional Factorial Designs 289

8.1	Introduction	289
8.2	The One-Half Fraction of the 2^k Design	290
8.2.1	Definitions and Basic Principles	290
8.2.2	Design Resolution	292
8.2.3	Construction and Analysis of the One-Half Fraction	293
8.3	The One-Quarter Fraction of the 2^k Design	302
8.4	The General 2^k Fractional Factorial Design	309
8.4.1	Choosing a Design	309
8.4.2	Analysis of 2^{k-p} Fractional Factorials	312
8.4.3	Blocking Fractional Factorials	313
8.5	Alias Structures in Fractional Factorials and other Designs	318
8.6	Resolution III Designs	320
8.6.1	Constructing Resolution III Designs	320
8.6.2	Fold Over of Resolution III Fractions to Separate Aliased Effects	322
8.6.3	Plackett-Burman Designs	326
8.7	Resolution IV and V Designs	335
8.7.1	Resolution IV Designs	335
8.7.2	Sequential Experimentation with Resolution IV Designs	339
8.7.3	Resolution V Designs	345
8.8	Supersaturated Designs	347
8.9	Summary	348
8.10	Problems	349

9

Three-Level and Mixed-Level Factorial and Fractional Factorial Designs 360

9.1	The 3^k Factorial Design	360
9.1.1	Notation and Motivation for the 3^k Design	360
9.1.2	The 3^2 Design	362
9.1.3	The 3^3 Design	363
9.1.4	The General 3^k Design	368
9.2	Confounding in the 3^k Factorial Design	368
9.2.1	The 3^k Factorial Design in Three Blocks	369
9.2.2	The 3^k Factorial Design in Nine Blocks	372
9.2.3	The 3^k Factorial Design in 3^p Blocks	373
9.3	Fractional Replication of the 3^k Factorial Design	374
9.3.1	The One-Third Fraction of the 3^k Factorial Design	374
9.3.2	Other 3^{k-p} Fractional Factorial Designs	376
9.4	Factorials with Mixed Levels	378
9.4.1	Factors at Two and Three Levels	378
9.4.2	Factors at Two and Four Levels	382
9.5	Problems	385

10

<i>Fitting Regression Models</i>	388
10.1 Introduction	388
10.2 Linear Regression Models	389
10.3 Estimation of the Parameters in Linear Regression Models	390
10.4 Hypothesis Testing in Multiple Regression	401
10.4.1 Test for Significance of Regression	401
10.4.2 Tests on Individual Regression Coefficients and Groups of Coefficients	403
10.5 Confidence Intervals in Multiple Regression	406
10.5.1 Confidence Intervals on the Individual Regression Coefficients	406
10.5.2 Confidence Interval on the Mean Response	407
10.6 Prediction of New Response Observations	407
10.7 Regression Model Diagnostics	409
10.7.1 Scaled Residuals and PRESS	409
10.7.2 Influence Diagnostics	411
10.8 Testing for Lack of Fit	412
10.9 Problems	414

11

<i>Response Surface Methods and Designs</i>	417
11.1 Introduction to Response Surface Methodology	417
11.2 The Method of Steepest Ascent	419
11.3 Analysis of a Second-Order Response Surface	425
11.3.1 Location of the Stationary Point	425
11.3.2 Characterizing the Response Surface	427
11.3.3 Ridge Systems	434
11.3.4 Multiple Responses	435
11.4 Experimental Designs for Fitting Response Surfaces	439
11.4.1 Designs for Fitting the First-Order Model	440
11.4.2 Designs for Fitting the Second-Order Model	440
11.4.3 Blocking in Response Surface Designs	446
11.4.4 Computer-Generated (Optimal) Designs	450
11.5 Experiments with Computer Models	459
11.6 Mixture Experiments	466
11.7 Evolutionary Operation	476
11.8 Problems	480

12

<i>Robust Parameter Design and Process Robustness Studies</i>	486
12.1 Introduction	486
12.2 Crossed Array Designs	488
12.3 Analysis of the Crossed Array Design	490
12.4 Combined Array Designs and the Response Model Approach	493
12.5 Choice of Designs	499
12.6 Problems	502

13

<i>Experiments with Random Factors</i>	505
13.1 The Random Effects Model	506
13.2 The Two-Factor Factorial with Random Factors	511
13.3 The Two-Factor Mixed Model	515
13.4 Sample Size Determination with Random Effects	520
13.5 Rules for Expected Mean Squares	522
13.6 Approximate <i>F</i> Tests	525
13.7 Some Additional Topics on Estimation of Variance Components	531
13.7.1 Approximate Confidence Intervals on Variance Components	531
13.7.2 The Modified Large-Sample Method	533
13.7.3 Maximum Likelihood Estimation of Variance Components	535
13.8 Problems	538

14

<i>Nested and Split-Plot Designs</i>	542
14.1 The Two-Stage Nested Design	542
14.1.1 Statistical Analysis	543
14.1.2 Diagnostic Checking	547
14.1.3 Variance Components	549
14.1.4 Staggered Nested Designs	550
14.2 The General <i>m</i> -Stage Nested Design	551
14.3 Designs with Both Nested and Factorial Factors	553
14.4 The Split-Plot Design	557
14.5 Other Variations of the Split-Plot Design	562
14.5.1 Split-Plot Designs with More Than Two Factors	562
14.5.2 The Split-Split-Plot Design	567
14.5.3 The Strip-Split-Plot Design	570
14.6 Problems	572

15

<i>Other Design and Analysis Topics</i>	577
15.1 Nonnormal Responses and Transformations	578
15.1.1 Selecting a Transformation: The Box-Cox Method	578
15.1.2 The Generalized Linear Model	580
15.2 Unbalanced Data in a Factorial Design	587
15.2.1 Proportional Data: An Easy Case	587
15.2.2 Approximate Methods	589
15.2.3 The Exact Method	590
15.3 The Analysis of Covariance	590
15.3.1 Description of the Procedure	591
15.3.2 Computer Solution	599
15.3.3 Development by the General Regression Significance Test	600
15.3.4 Factorial Experiments with Covariates	602
15.4 Repeated Measures	607
15.5 Problems	609
