

# PRINCIPLES OF Bioinorganic Chemistry

Stephen J. LIPPARD  
Jeremy M. BERG

## CHAPTER 1 Overview of Bioinorganic Chemistry 1

- 1.1. What is Bioinorganic Chemistry? 1
  - 1.2. Metal Functions in Metalloproteins 3
    - 1.2.a. Dioxygen Transport 3
    - 1.2.b. Electron Transfer 6
    - 1.2.c. Structural Roles for Metal Ions 6
  - 1.3. Metalloenzyme Functions 8
    - 1.3.a. Hydrolytic Enzymes 8
    - 1.3.b. Two-Electron Redox Enzymes 10
    - 1.3.c. Multielectron Pair Redox Enzymes 11
    - 1.3.d. Rearrangements 12
  - 1.4. Communication Roles for Metals in Biology 14
  - 1.5. Interactions of Metal Ions and Nucleic Acids 14
  - 1.6. Metal-Ion Transport and Storage 16
  - 1.7. Metals in Medicine 16
  - 1.8. Organization of This Book 18
- Study Problems 19
- Bibliography 19

## CHAPTER 2 Principles of Coordination Chemistry Related to Bioinorganic Research 21

- 2.1. Thermodynamic Aspects 21
  - 2.1.a. The Hard-Soft Acid-Base Concept 21
  - 2.1.b. The Chelate Effect and the Irving-Williams Series 24
  - 2.1.c.  $pK_a$  Values of Coordinated Ligands 24
  - 2.1.d. Tuning of Redox Potentials 26
  - 2.1.e. Biopolymer Effects 28
- 2.2. Kinetic Aspects 28
  - 2.2.a. Ligand Exchange Rates 28
  - 2.2.b. Substitution Reactions 30
  - 2.2.c. Electron Transfer Reactions 30

- 2.3. Electronic and Geometric Structures of Metal Ions in Biology 31
  - 2.4. Reactions of Coordinated Ligands 35
  - 2.5. Model Complexes and the Concept of Spontaneous Self-Assembly 37
- Study Problems 40  
Bibliography 41

## CHAPTER 3 Properties of Biological Molecules 43

- 3.1. Proteins and Their Constituents 43
    - 3.1.a. The Naturally Occurring Amino Acids 43
    - 3.1.b. Proteins as Ligands 45
    - 3.1.c. Protein Structure 47
    - 3.1.d. Higher-Order Structures 50
    - 3.1.e. The Manipulation of Proteins by Gene Cloning and Expression 50
    - 3.1.f. The Kinetic Analysis of Enzyme Reactions 55
  - 3.2. Nucleic Acids and their Constituents 57
    - 3.2.a. RNA, DNA, and Their Building Blocks 57
    - 3.2.b. RNA Structure 60
    - 3.2.c. DNA Structure 61
    - 3.2.d. Metal Binding and Nucleic Acid Structure 64
    - 3.2.e. Chromosome Structures 66
    - 3.2.f. Nucleic-Acid Synthesis *in Vitro* 66
    - 3.2.g. Sulfur Atoms in Nucleic Acids 69
  - 3.3. Other Metal-Binding Biomolecules 69
    - 3.3.a. Prosthetic Groups 69
    - 3.3.b. Coenzyme B-12 70
    - 3.3.c. Bleomycin and Siderophores 70
    - 3.3.d. Complex Assemblies 72
- Study Problems 73  
Bibliography 73

## CHAPTER 4 Physical Methods in Bioinorganic Chemistry 75

- 4.1. Purpose of this Chapter 75
- 4.2. A Comment on Time Scales 75
- 4.3. X-ray Methods 77
  - 4.3.a. X-ray Diffraction 77
  - 4.3.b. X-ray Absorption Spectroscopy (XAS) 82
- 4.4. Magnetic Resonance Methods 83
  - 4.4.a. Electron Paramagnetic Resonance (EPR) Spectroscopy 84
  - 4.4.b. Nuclear Magnetic Resonance (NMR) Spectroscopy 88
- 4.5. Mössbauer Spectroscopy 91

- 4.6. Electronic and Vibrational Spectroscopy 92
  - 4.6.a. Electronic Spectra 92
  - 4.6.b. Vibrational Spectroscopy 94
  - 4.6.c. Circular Dichroism and Magnetic Circular Dichroism Spectroscopy 95
- 4.7. Magnetic Measurements 96
- 4.8. Reduction Potential Measurements 97
- 4.9. Electron Microprobe Analysis 98
- Study Problems 99
- Bibliography 100

## **CHAPTER 5 Choice, Uptake, and Assembly of Metal Containing Units in Biology 103**

- 5.1. Bioavailability of Metal Ions 105
- 5.2. Enrichment Strategies and Intracellular Chemistry of Low-Abundance Metals 111
- 5.3. Spontaneous Self-Assembly of Metal Clusters 115
  - 5.3.a. Iron-Sulfur Clusters 115
  - 5.3.b. Polyiron Oxo Clusters and Biomineralization 125
- 5.4. Specialized Units 131
  - 5.4.a. Porphyrins 131
  - 5.4.b. Corrins and Hydroporphyrins 131
  - 5.4.c. Metal-Nucleotide Complexes 132
  - 5.4.d. Molybdenum-Binding Cofactors 132
- Study Problems 136
- Bibliography 136

## **CHAPTER 6 Control and Utilization of Metal-Ion Concentration in Cells 139**

- 6.1. Beneficial and Toxic Effects of Metal Ions 139
- 6.2. A Beneficial Metal Under Tight Regulation: Iron 141
  - 6.2.a. Solubilization, Uptake and Transport 142
  - 6.2.b. Metalloregulation of Uptake and Storage 145
- 6.3. An Example of a Toxic Metal: Mercury 148
  - 6.3.a. The Enzymes Involved in Mercury Detoxification 149
  - 6.3.b. Metalloregulation of the Mercury Detoxification Genes 151
- 6.4. The Generation and Uses of Metal-Ion-Concentration Gradients 152
  - 6.4.a. Generation of Ionic Gradients 154
  - 6.4.b. Ion Transport by Ion Channels 156
  - 6.4.c. The Acetylcholine Receptor 156
  - 6.4.d. The Voltage-Gated Sodium Channel 162
  - 6.4.e. Synthetic Models for Ion Channels 167

6.5. Tissue Selectivity in Metal Drug Distribution	168
Study Problems	170
Bibliography	171

## **CHAPTER 7 Metal Ion Folding and Cross-Linking of Biomolecules** 175

7.1. Metal-Ion Stabilization of Protein Structure	175
7.1.a. Aspartate Transcarbamoylase	175
7.1.b. Zinc-Binding Domains in Nucleic-Acid-Binding Proteins	178
7.1.c. Calcium-Binding Proteins: Transient Structural Stabilization	184
7.2. Metal-Ion Stabilization of Nucleic-Acid Structure	192
7.2.a. Transfer RNA	193
7.2.b. Catalytic RNA Molecules	194
7.2.c. Telomeres	196
7.3. Protein Binding to Metallated DNA	198
7.3.a. Unwinding and Bending of DNA Modified by Platinum Anticancer Drugs	198
7.3.b. Recognition and Binding of High-Mobility-Group (Box) Proteins to DNA Containing Cisplatin Intrastrand d(GpG) or d(ApG) Cross-Links	200
7.4. Metal-Organized Structures as Probes for Conformation	206
7.4.a. Metallointercalators	206
7.4.b. Conformational Recognition	206
Study Problems	210
Bibliography	210

## **CHAPTER 8 Binding of Metal Ions and Complexes to Biomolecule-Active Centers** 213

8.1. Selection and Insertion of Metal Ions for Protein Sites	213
8.1.a. Thermodynamic Control	214
8.1.b. Kinetic Control	217
8.1.c. Bioavailability	218
8.2. Preservation of Electroneutrality	218
8.2.a. Mononuclear Sites	219
8.2.b. Polynuclear Sites	220
8.3. Metal-Ion and Metal-Complex Binding to Nucleic Acids	221
8.4. Biopolymer-Promoted Metal-Ligand Interactions	223
8.4.a. Ferrochelatase	223
8.4.b. DNA-Promoted Reaction Chemistry	227
Study Problems	229
Bibliography	229

## CHAPTER 9 Electron-Transfer Proteins 231

- 9.1. Electron Carriers 231
  - 9.1.a. Iron-Sulfur Proteins 232
  - 9.1.b. Blue Copper Proteins 237
  - 9.1.c. Cytochromes 243
- 9.2. Long-Distance Electron Transfer 244
- 9.3. Distance and Driving-Force Dependence of Electron Transfer 247
- Study Problems 253
- Bibliography 254

## CHAPTER 10 Substrate Binding and Activation by Nonredox Mechanisms 257

- 10.1. Hydrolytic Enzymes 258
  - 10.1.a. Carboxypeptidase A and Thermolysin: Structural Studies 259
  - 10.1.b. Carboxypeptidase A: Metal Substitution and Spectroscopy 262
  - 10.1.c. Kinetic Studies and the Postulated Enzyme Mechanism 263
  - 10.1.d. Alkaline Phosphatase 267
- 10.2. A Lyase, Carbonic Anhydrase 267
- 10.3. An Oxidoreductase, Alcohol Dehydrogenase 271
- 10.4. Nucleotide Activation 274
- Study Problems 279
- Bibliography 279

## CHAPTER 11 Atom- and Group-Transfer Chemistry 283

- 11.1. Dioxygen Transport 284
  - 11.1.a. Hemoglobin and Myoglobin 285
  - 11.1.b. Hemerythrin 291
  - 11.1.c. Hemocyanin 297
- 11.2. Oxygen-Atom-Transfer Reactions: Fe 302
  - 11.2.a. Cytochrome P-450 303
  - 11.2.b. Methane Monooxygenase 311
  - 11.2.c. Catechol and Other Dioxygenases 315
- 11.3. Oxygen-Atom-Transfer Reactions: Mo 318
  - 11.3.a. Molybdenum Oxotransferase Enzymes 318
  - 11.3.b. Models for Molybdenum Oxotransferases 322

- 11.4. Other Reactions of Dioxygen and Its Byproducts 325
  - 11.4.a. Protective Metalloenzymes: The Cu-Zn Superoxide Dismutase 325
  - 11.4.b. A Protective Metalloenzyme, Catalase, and Peroxidases 329
  - 11.4.c. Dioxygen Radical-Generating Systems 333
- 11.5. Coenzyme B-12 Dependent Reactions 336
  - 11.5.a. Historical Perspective 336
  - 11.5.b. Enzymatic Reactions and the Catalytic Mechanism 337
  - 11.5.c. Thermodynamic Considerations and the Role of the Enzyme 340

Study Problems 344

Bibliography 344

## **CHAPTER 12 Protein Tuning of Metal Properties to Achieve Specific Functions 349**

- 12.1. The Basic Concept 349
- 12.2. Control of Function by Protein Side Chains: Opening Coordination Sites 351
  - 12.2.a. Heme Proteins 351
  - 12.2.b. Iron-Sulfur Proteins: Aconitase 352
  - 12.2.c. Zinc Proteins 354
- 12.3. Control of Function by Ligand Type 355
  - 12.3.a. Heme Proteins 356
  - 12.3.b. Iron-Sulfur Proteins: Rieske Centers 358
- 12.4. Control of Function by Coordination Geometry: Blue Copper Proteins 359
- 12.5. Control of Function by Indirect Effects 360
  - 12.5.a.  $[\text{Fe}_4\text{S}_4(\text{Cys})_4]$  Centers: Hydrophobicity and Hydrogen-Bonding Effects 360
  - 12.5.b. Cytochromes: Electrostatic Potential 362
- 12.6. Substrate Specificity 364
  - 12.6.a. Proteases 365
  - 12.6.b. Cytochromes P-450 366
- 12.7. Coupled Processes 369
  - 12.7.a. Electron Transfer Coupling—Sulfite Oxidase 369
  - 12.7.b. Chemical and Electron-Transfer Coupling: Nitrogenase 370
  - 12.7.c. Substrate Binding: Cytochrome P-450 370
  - 12.7.d. Membrane Transport: Photosynthetic Reaction Center 372

Study Problems 376

Bibliography 377

## **CHAPTER 13 The Frontiers of Bioinorganic Chemistry 379**

- 13.1 Choice and Uptake of Metal Ions 380
- 13.2. Control and Utilization of Metal-Ion Concentrations 381
- 13.3. Metal Folding and Cross-Linking 383
- 13.4. Binding of Metal Ions to Biomolecules 384
- 13.5. Electron-Transfer Proteins 385
- 13.6. Substrate Binding and Activation 385
- 13.7. Atom- and Group-Transfer Chemistry 386
- 13.8. Protein Tuning of the Active Sites 388
- Study Problems 390
- Bibliography 390

**Index 393**
