

Second Edition

Colloid Science

Principles, Methods and Applications

Editor **Terence Cosgrove**

 WILEY

Contents

<i>Preface</i>	xv
<i>Introduction</i>	xvii
<i>Acknowledgements</i>	xix
<i>List of Contributors</i>	xxi
1 An Introduction to Colloids	1
<i>Roy Hughes</i>	
1.1 Introduction	1
1.2 Basic Definitions	5
1.2.1 Concentration	5
1.2.2 Interfacial Area	10
1.2.3 Effective Concentrations	11
1.2.4 Average Separation	12
1.3 Stability	14
1.3.1 Quiescent Systems	15
1.3.2 Sedimentation or Creaming	16
1.3.3 Shearing Flows	17
1.3.4 Other Forms of Instability	17
1.4 Colloid Frontiers	18
References	20
2 Charge in Colloidal Systems	23
<i>David Fermin and Jason Riley</i>	
2.1 Introduction	23
2.2 The Origin of Surface Charge	24
2.2.1 Ionisation of Surface Groups	24
2.2.2 Ion Adsorption	25
2.2.3 Dissolution of Ionic Solids	25
2.2.4 Isomorphous Substitution	25
2.2.5 Potential Determining Ions	25
2.3 The Electrochemical Double Layer	26
2.3.1 The Stern–Gouy–Chapman (SGC) Model of the Double Layer	26
2.3.2 The Double Layer at the Hg/Electrolyte Interface	30
2.3.3 Specific Adsorption	34
2.3.4 Interparticle Forces	36

2.4	Electrokinetic Properties	36
2.4.1	Electrolyte Flow	36
2.4.2	Streaming Potential Measurements	37
2.4.3	Electro-osmosis	38
2.4.4	Electrophoresis	39
2.4.5	Electroacoustic Technique	42
	References	42
3	Stability of Charge-stabilised Colloids	45
	<i>John Eastman</i>	
3.1	Introduction	45
3.2	The Colloidal Pair Potential	46
3.2.1	Attractive Forces	46
3.2.2	Electrostatic Repulsion	47
3.2.3	Effect of Particle Concentration	49
3.2.4	Total Potential	50
3.3	Criteria for Stability	51
3.3.1	Salt Concentration	51
3.3.2	Counter-ion Valency	52
3.3.3	Zeta Potential	54
3.3.4	Particle Size	54
3.4	Kinetics of Coagulation	55
3.4.1	Diffusion-limited Rapid Coagulation	55
3.4.2	Interaction-limited Coagulation	56
3.4.3	Experimental Determination of c.c.c.	57
3.5	Conclusions	58
	References	59
4	Surfactant Aggregation and Adsorption at Interfaces	61
	<i>Julian Eastoe</i>	
4.1	Introduction	61
4.2	Characteristic Features of Surfactants	61
4.3	Classification and Applications of Surfactants	62
4.3.1	Types of Surfactants	62
4.3.2	Surfactant Uses and Development	64
4.4	Adsorption of Surfactants at Interfaces	66
4.4.1	Surface Tension and Surface Activity	66
4.4.2	Surface Excess and Thermodynamics of Adsorption	67
4.4.3	Efficiency and Effectiveness of Surfactant Adsorption	71
4.5	Surfactant Solubility	73
4.5.1	The Krafft Temperature	73
4.5.2	The Cloud Point	74
4.6	Micellisation	75
4.6.1	Thermodynamics of Micellisation	75

4.6.2	Factors Affecting the CMC	78
4.6.3	Structure of Micelles and Molecular Packing	80
4.7	Liquid Crystalline Mesophases	82
4.7.1	Definition	82
4.7.2	Structures	83
4.7.3	Phase Diagrams	86
4.8	Advanced Surfactants	87
	References	88
5	Microemulsions	91
	<i>Julian Eastoe</i>	
5.1	Introduction	91
5.2	Microemulsions: Definition and History	91
5.3	Theory of Formation and Stability	93
5.3.1	Interfacial Tension in Microemulsions	93
5.3.2	Kinetic Instability	95
5.4	Physicochemical Properties	95
5.4.1	Predicting Microemulsion Type	95
5.4.2	Surfactant Film Properties	101
5.4.3	Phase Behaviour	107
5.5	Developments and Applications	110
5.5.1	Microemulsions with Green and Novel Solvents	110
5.5.2	Microemulsions as Reaction Media for Nanoparticles	113
	References	114
6	Emulsions	117
	<i>Brian Vincent</i>	
6.1	Introduction	117
6.1.1	Definitions of Emulsion Type	117
6.1.2	Novel Features of Emulsion Systems, Compared to Solid/Liquid Dispersions	120
6.2	Preparation	120
6.2.1	Comminution – Batch	120
6.2.2	Comminution – Continuous	124
6.2.3	Nucleation and Growth	124
6.3	Stability	126
6.3.1	Introduction	126
6.3.2	Sedimentation and Creaming	126
6.3.3	Aggregation	127
6.3.4	Coalescence	128
6.3.5	Ostwald Ripening	130
6.3.6	Phase Inversion	131
	References	133

7	Polymers and Polymer Solutions	135
	<i>Terence Cosgrove</i>	
7.1	Introduction	135
7.2	Polymerisation	135
	7.2.1 Condensation	136
	7.2.2 Free Radical	136
	7.2.3 Ionic Methods	137
7.3	Copolymers	137
7.4	Polymer Physical Properties	138
	7.4.1 Entanglements	138
7.5	Polymer Uses	138
7.6	Theoretical Models of Polymer Structure	138
	7.6.1 Radius of Gyration	139
	7.6.2 Worm-like Chains	141
	7.6.3 Radius of Gyration in Ideal Solution	142
	7.6.4 Excluded Volume	142
	7.6.5 Scaling Theory: Blobs	143
	7.6.6 Polyelectrolytes	144
7.7	Measuring Polymer Molecular Weight	144
	7.7.1 Viscosity	146
7.8	Flory-Huggins Theory	146
	7.8.1 Polymer Solutions	146
	7.8.2 Polymer Melts	150
	7.8.3 Copolymers	150
	References	150
8	Polymers at Interfaces	151
	<i>Terence Cosgrove</i>	
8.1	Introduction	151
	8.1.1 Steric Stability	152
	8.1.2 The Size and Shape of Polymers in Solution	152
	8.1.3 Adsorption of Small Molecules	154
8.2	Adsorption of Polymers	155
	8.2.1 Configurational Entropy	155
	8.2.2 The Flory Surface Parameter χ_s	155
8.3	Models and Simulations for Terminally Attached Chains	156
	8.3.1 Atomistic Modelling	156
	8.3.2 Exact Enumeration: Terminally Attached Chains	157
	8.3.3 Approximate Methods: Terminally Attached Chains	160
	8.3.4 Scaling Models for Terminally Attached Chains (Brushes)	160
	8.3.5 Physically Adsorbed Chains: Scheutjens and Fleer Theory	161
	8.3.6 Scaling Theory for Physical Adsorption	165
8.4	Experimental Aspects	166
	8.4.1 Volume Fraction Profiles	166
	8.4.2 Adsorption Isotherms	167

8.4.3	The Bound Fraction	170
8.4.4	The Layer Thickness	171
8.5	Copolymers	175
8.5.1	Liquid/Liquid Interfaces	176
8.6	Polymer Brushes	177
8.7	Conclusions	179
	References	180
9	Effect of Polymers on Colloid Stability	181
	<i>Jeroen van Duijneveldt</i>	
9.1	Introduction	181
9.1.1	Colloid Stability	181
9.1.2	Limitations of Charge Stabilisation	182
9.1.3	Effect of Polymers on Interactions	182
9.2	Particle Interaction Potential	182
9.2.1	Measuring Surface Forces	183
9.3	Steric Stabilisation	183
9.3.1	Theory	183
9.3.2	Steric Stabiliser Design	186
9.3.3	Marginal Solvents	187
9.4	Depletion Interactions	189
9.5	Bridging Interactions	192
9.6	Conclusion	193
	References	194
10	Wetting of Surfaces	197
	<i>Paul Reynolds</i>	
10.1	Introduction	197
10.2	Surfaces and Definitions	198
10.3	Surface Tension	198
10.4	Surface Energy	199
10.5	Contact Angles	199
10.6	Wetting	200
10.7	Liquid Spreading and Spreading Coefficients	202
10.8	Cohesion and Adhesion	203
10.9	Two Liquids on a Surface	204
10.10	Detergency	207
10.11	Spreading of a Liquid on a Liquid	207
10.12	Characterisation of a Solid Surface	210
10.13	Polar and Dispersive Components	210
10.14	Polar Materials	211
10.15	Wettability Envelopes	212
10.16	Measurement Methods	214
10.17	Conclusions	216
	References	216

11	Aerosols	219
	<i>Nana-Owusua A. Kwamena and Jonathan P. Reid</i>	
11.1	Introduction	219
11.2	Generating and Sampling Aerosols	222
11.2.1	Generating Aerosols	222
11.2.2	Sampling Aerosol	224
11.3	Determining the Particle Concentration and Size	225
11.3.1	Determining the Number Concentration	226
11.3.2	Determining the Mass Concentration	226
11.3.3	Determining Particle Size	227
11.4	Determining Particle Composition	230
11.4.1	Off-line Analysis	230
11.4.2	Real-time Analysis	231
11.5	The Equilibrium State of Aerosols	234
11.5.1	Deliquescence and Efflorescence	234
11.5.2	Köhler Theory	235
11.5.3	Measurements of Hygroscopic Growth	237
11.5.4	Other Phases	238
11.6	The Kinetics of Aerosol Transformation	238
11.6.1	Steady and Unsteady Mass and Heat Transfer	239
11.6.2	Uptake of Trace Species and Heterogeneous Chemistry	240
11.7	Concluding Remarks	242
	References	242
12	Practical Rheology	245
	<i>Roy Hughes</i>	
12.1	Introduction	245
12.2	Making Measurements	245
12.2.1	Definitions	246
12.2.2	Designing an Experiment	248
12.2.3	Geometries	250
12.2.4	Viscometry	252
12.2.5	Shear Thinning and Thickening Behaviour	254
12.3	Rheometry and Viscoelasticity	256
12.3.1	Viscoelasticity and Deborah Number	256
12.3.2	Oscillation and Linearity	257
12.3.3	Creep Compliance	258
12.3.4	Liquid and Solid Behaviour	259
12.3.5	Sedimentation and Storage Stability	261
12.4	Examples of Soft Materials	263
12.4.1	Simple Particles and Polymers	264
12.4.2	Networks and Functionalisation	267
12.4.3	Polymeric Additives	268
12.4.4	Particle Additives	268
12.5	Summary	271
	References	272

13	Scattering and Reflection Techniques	273
	<i>Robert Richardson</i>	
13.1	Introduction	273
13.2	The Principle of a Scattering Experiment	274
13.3	Radiation for Scattering Experiments	275
13.4	Light Scattering	276
13.5	Dynamic Light Scattering	278
13.6	Small Angle Scattering	279
13.7	Sources of Radiation	279
13.8	Small Angle Scattering Apparatus	280
13.9	Scattering and Absorption by Atoms	282
13.10	Scattering Length Density	283
13.11	Small Angle Scattering from a Dispersion	284
13.12	Form Factor for Spherical Particles	285
13.13	Determining Particle Size from SANS and SAXS	285
13.14	Guinier Plots to Determine Radius of Gyration	286
13.15	Determination of Particle Shape	286
13.16	Polydispersity	287
13.17	Determination of Particle Size Distribution	288
13.18	Alignment of Anisotropic Particles	289
13.19	Concentrated Dispersions	289
13.20	Contrast Variation Using SANS	290
13.21	High Q Limit: Porod Law	292
13.22	Introduction to X-Ray and Neutron Reflection	294
13.23	Reflection Experiment	295
13.24	A Simple Example of a Reflection Measurement	295
13.25	Conclusion	297
	References	297
14	Optical Manipulation	299
	<i>Paul Bartlett</i>	
14.1	Introduction	299
14.2	Manipulating Matter with Light	299
14.3	Force Generation in Optical Tweezers	302
14.4	Nanofabrication	304
14.5	Single Particle Dynamics	305
	14.5.1 Measuring Nanometer Displacements	305
	14.5.2 Brownian Fluctuations in an Optical Trap	306
	14.5.3 Dynamical Complexity in Colloidal Gels	307
14.6	Conclusions	308
	References	308
15	Electron Microscopy	311
	<i>Sean Davis</i>	
15.1	General Features of (Electron) Optical Imaging Systems	311

15.2	Conventional TEM	313
15.2.1	Background	313
15.2.2	Practical Aspects	314
15.2.3	Polymer Latex Particles	315
15.2.4	Core/Shell Particles	316
15.2.5	Internal Structure	317
15.3	Conventional SEM	321
15.3.1	Background	321
15.3.2	Types of Signal	321
15.3.3	Practical Aspects	321
15.4	Summary	327
