# Mass Spectrometry

**Principles and Applications**

*Third Edition*

 WILEY

# Contents

<b>Preface</b>	<b>xi</b>
<b>Introduction</b>	<b>1</b>
Principles	1
Diagram of a Mass Spectrometer	4
History	5
Ion Free Path	10
<b>1 Ion Sources</b>	<b>15</b>
1.1 Electron Ionization	15
1.2 Chemical Ionization	17
1.2.1 Proton transfer	19
1.2.2 Adduct formation	21
1.2.3 Charge-transfer chemical ionization	21
1.2.4 Reagent gas	22
1.2.5 Negative ion formation	25
1.2.6 Desorption chemical ionization	27
1.3 Field Ionization	28
1.4 Fast Atom Bombardment and Liquid Secondary Ion Mass Spectrometry	29
1.5 Field Desorption	31
1.6 Plasma Desorption	32
1.7 Laser Desorption	33
1.8 Matrix-Assisted Laser Desorption Ionization	33
1.8.1 Principle of MALDI	33
1.8.2 Practical considerations	36
1.8.3 Fragmentations	39
1.8.4 Atmospheric pressure matrix-assisted laser desorption ionization	39
1.9 Thermospray	41
1.10 Atmospheric Pressure Ionization	42
1.11 Electrospray	43
1.11.1 Multiply charged ions	46
1.11.2 Electrochemistry and electric field as origins of multiply charged ions	48
1.11.3 Sensitivity to concentration	50
1.11.4 Limitation of ion current from the source by the electrochemical process	51
1.11.5 Practical considerations	54
1.12 Atmospheric Pressure Chemical Ionization	55
1.13 Atmospheric Pressure Photoionization	56

1.14	Atmospheric Pressure Secondary Ion Mass Spectrometry	61
1.14.1	Desorption electrospray ionization	61
1.14.2	Direct analysis in real time	62
1.15	Inorganic Ionization Sources	65
1.15.1	Thermal ionization source	65
1.15.2	Spark source	67
1.15.3	Glow discharge source	68
1.15.4	Inductively coupled plasma source	69
1.15.5	Practical considerations	71
1.16	Gas-Phase Ion-Molecule Reactions	72
1.17	Formation and Fragmentation of Ions: Basic Rules	76
1.17.1	Electron ionization and photoionization under vacuum	77
1.17.2	Ionization at low pressure or at atmospheric pressure	77
1.17.3	Proton transfer	77
1.17.4	Adduct formation	78
1.17.5	Formation of aggregates or clusters	79
1.17.6	Reactions at the interface between source and analyser	79
<b>2</b>	<b>Mass Analysers</b>	<b>85</b>
2.1	Quadrupole Analysers	88
2.1.1	Description	88
2.1.2	Equations of motion	91
2.1.3	Ion guide and collision cell	96
2.1.4	Spectrometers with several quadrupoles in tandem	98
2.2	Ion Trap Analysers	100
2.2.1	The 3D ion trap	100
2.2.2	The 2D ion trap	117
2.3	The Electrostatic Trap or 'Orbitrap'	122
2.4	Time-of-Flight Analysers	126
2.4.1	Linear time-of-flight mass spectrometer	126
2.4.2	Delayed pulsed extraction	129
2.4.3	Reflectrons	131
2.4.4	Tandem mass spectrometry with time-of-flight analyser	134
2.4.5	Orthogonal acceleration time-of-flight instruments	139
2.5	Magnetic and Electromagnetic Analysers	143
2.5.1	Action of the magnetic field	143
2.5.2	Electrostatic field	144
2.5.3	Dispersion and resolution	145
2.5.4	Practical considerations	146
2.5.5	Tandem mass spectrometry in electromagnetic analysers	149
2.6	Ion Cyclotron Resonance and Fourier Transform Mass Spectrometry	157
2.6.1	General principle	157
2.6.2	Ion cyclotron resonance	159
2.6.3	Fourier transform mass spectrometry	159
2.6.4	MS <sup>n</sup> in ICR/FTMS instruments	164
2.7	Hybrid Instruments	164
2.7.1	Electromagnetic analysers coupled to quadrupoles or ion trap	165
2.7.2	Ion trap analyser combined with time-of-flight or ion cyclotron resonance	166
2.7.3	Hybrids including time-of-flight with orthogonal acceleration	167

<b>3</b>	<b>Detectors and Computers</b>	<b>175</b>
3.1	Detectors	175
3.1.1	Photographic plate	176
3.1.2	Faraday cup	176
3.1.3	Electron multipliers	177
3.1.4	Electro-optical ion detectors	181
3.2	Computers	182
3.2.1	Functions	183
3.2.2	Instrumentation	183
3.2.3	Data acquisition	183
3.2.4	Data conversion	186
3.2.5	Data reduction	186
3.2.6	Library search	186
<b>4</b>	<b>Tandem Mass Spectrometry</b>	<b>189</b>
4.1	Tandem Mass Spectrometry in Space or in Time	189
4.2	Tandem Mass Spectrometry Scan Modes	192
4.3	Collision-Activated Decomposition or Collision-Induced Dissociation	195
4.3.1	Collision energy conversion to internal energy	196
4.3.2	High-energy collision (keV)	198
4.3.3	Low-energy collision (between 1 and 100 eV)	199
4.4	Other Methods of Ion Activation	199
4.5	Reactions Studied in MS/MS	202
4.6	Tandem Mass Spectrometry Applications	204
4.6.1	Structure elucidation	205
4.6.2	Selective detection of target compound class	207
4.6.3	Ion-molecule reaction	210
4.6.4	The kinetic method	211
<b>5</b>	<b>Mass Spectrometry/Chromatography Coupling</b>	<b>217</b>
5.1	Elution Chromatography Coupling Techniques	218
5.1.1	Gas chromatography/mass spectrometry	219
5.1.2	Liquid chromatography/mass spectrometry	221
5.1.3	Capillary electrophoresis/mass spectrometry	228
5.2	Chromatography Data Acquisition Modes	228
5.3	Data Recording and Treatment	230
5.3.1	Data recording	230
5.3.2	Instrument control and treatment of results	232
<b>6</b>	<b>Analytical Information</b>	<b>243</b>
6.1	Mass Spectrometry Spectral Collections	243
6.2	High Resolution	245
6.2.1	Information at different resolving powers	249
6.2.2	Determination of the elemental composition	251
6.3	Isotopic Abundances	251
6.4	Low-mass Fragments and Lost Neutrals	257
6.5	Number of Rings or Unsaturation	258
6.6	Mass and Electron Parities, Closed-shell Ions and Open-shell Ions	259
6.6.1	Electron parity	259
6.6.2	Mass parity	259
6.6.3	Relationship between mass and electron parity	260

6.7	Quantitative Data	260
6.7.1	Specificity	260
6.7.2	Sensitivity and detection limit	262
6.7.3	External standard method	264
6.7.4	Sources of error	265
6.7.5	Internal standard method	266
6.7.6	Isotopic dilution method	268

## **7 Fragmentation Reactions 273**

7.1	Electron Ionization and Fragmentation Rates	273
7.2	Quasi-Equilibrium and RRKM Theory	275
7.3	Ionization and Appearance Energies	279
7.4	Fragmentation Reactions of Positive Ions	280
7.4.1	Fragmentation of odd-electron cations or radical cations ( $OE^{*+}$ )	280
7.4.2	Fragmentation of cations with an even number of electrons ( $EE^+$ )	286
7.4.3	Fragmentations obeying the parity rule	288
7.4.4	Fragmentations not obeying the parity rule	291
7.5	Fragmentation Reactions of Negative Ions	291
7.5.1	Fragmentation mechanisms of even electron anions ( $EE^-$ )	292
7.5.2	Fragmentation mechanisms of radical anions ( $OE^{*-}$ )	293
7.6	Charge Remote Fragmentation	293
7.7	Spectrum Interpretation	294
7.7.1	Typical ions	296
7.7.2	Presence of the molecular ion	296
7.7.3	Typical neutrals	296
7.7.4	A few examples of the interpretation of mass spectra	298

## **8 Analysis of Biomolecules 305**

8.1	Biomolecules and Mass Spectrometry	305
8.2	Proteins and Peptides	306
8.2.1	ESI and MALDI	307
8.2.2	Structure and sequence determination using fragmentation	309
8.2.3	Applications	324
8.3	Oligonucleotides	342
8.3.1	Mass spectra of oligonucleotides	343
8.3.2	Applications of mass spectrometry to oligonucleotides	346
8.3.3	Fragmentation of oligonucleotides	351
8.3.4	Characterization of modified oligonucleotides	355
8.4	Oligosaccharides	357
8.4.1	Mass spectra of oligosaccharides	358
8.4.2	Fragmentation of oligosaccharides	360
8.4.3	Degradation of oligosaccharides coupled with mass spectrometry	367
8.5	Lipids	371
8.5.1	Fatty acids	373
8.5.2	Acylglycerols	376
8.5.3	Bile acids ;	382
8.6	Metabolomics	386
8.6.1	Mass spectrometry in metabolomics	387
8.6.2	Applications	388

<b>9 Exercises</b>	<b>403</b>
Questions	403
Answers	415
<b>Appendices</b>	<b>437</b>
1 Nomenclature	437
1.1 Units	437
1.2 Definitions	437
1.3 Analysers	438
1.4 Detection	439
1.5 Ionization	440
1.6 Ion types	441
1.7 Ion-molecule reaction	442
1.8 Fragmentation	442
2 Acronyms and abbreviations	442
3 Fundamental Physical Constants	446
4A Table of Isotopes in Ascending Mass Order	447
4B Table of Isotopes in Alphabetical Order	452
5 Isotopic Abundances (in %) for Various Elemental Compositions CHON	457
6 Gas-Phase Ion Thermochemical Data of Molecules	467
7 Gas-Phase Ion Thermochemical Data of Radicals	469
8 Literature on Mass Spectrometry	470
9 Mass Spectrometry on Internet	476
<b>Index</b>	<b>479</b>
