

# *Inorganic Chemistry in Aqueous Solution*

by JACK BARRETT

# Contents

<b>1</b>	<b>Water and its Solvent Properties</b>	<b>1</b>
1.1	Introduction	1
1.2	Liquid Water	3
<b>2</b>	<b>Liquid Water and the Hydration of Ions</b>	<b>13</b>
2.1	The Structure of Liquid Water	13
2.2	Ions and their Hydration	14
2.3	Gibbs Energies and Enthalpies of Formation of Hydrated Ions	19
2.4	Standard Molar Enthalpies of Hydration of Ions	22
2.5	The Absolute Value for the Standard Molar Enthalpy of Hydration of the Proton	28
2.6	Absolute Values of the Standard Molar Enthalpies of Hydration of Ions	30
2.7	Standard Molar Entropies of Hydration of Ions	37
<b>3</b>	<b>Acids and Bases; Forms of Ions in Aqueous Solution; Ion Hydrolysis &amp; Compound Solubility</b>	<b>45</b>
3.1	Acids and Bases in Aqueous Solutions	45
3.2	Bronsted and Lowry Acids and Bases	46
3.3	pH and the pH Scale	52
3.4	Factors Influencing Acidic and Basic Behaviour in Aqueous Solutions	54

3.5	Forms of Ions in Aqueous Solution; Hydrolysis	55
3.6	Solubilities of Ionic Compounds in Water	57
<b>4</b>	<b>Thermodynamics and Electrode Potentials</b>	<b>71</b>
4.1	Changes in Standard Gibbs Energy and their Relation to Standard Electrode Potentials	71
4.2	The Hydrated Electron and Absolute Values of Reduction Potentials	80
<b>5</b>	<b>The Stabilities of Ions in Aqueous Solution</b>	<b>87</b>
5.1	The Limits of Stability of Ions in Aqueous Systems	88
5.2	Latimer and Volt-equivalent (Frost) Diagrams	91
<b>6</b>	<b>Periodicity of Aqueous Chemistry I: s- and p-Block Chemistry</b>	<b>98</b>
6.1	Periodicity of the Ions Formed by the s- and p-Block Elements	99
6.2	The Detailed Aqueous Chemistry of the s- and p-Block Elements	103
6.3	Summary of the s- and p-Block Periodicity	121
<b>7</b>	<b>Periodicity of Aqueous Chemistry II: d-Block Chemistry</b>	<b>124</b>
7.1	The Ions Formed by the Transition Elements	124
7.2	Enthalpies of Hydration of Some Transition Element Cations	128
7.3	Variations in the Enthalpies of Hydration of the +2 and +3 Ions of the Transition Elements	131
7.4	Variations of Ionic Forms and Redox Behaviour across the First Series of Transition Elements	137
7.5	General Redox Chemistry of the d-Block Elements	145
<b>8</b>	<b>Periodicity of Aqueous Chemistry III: f-Block Chemistry</b>	<b>160</b>
8.1	The Lanthanides	160
8.2	The Actinides	166
	<b>Answers to Problems</b>	<b>171</b>
	<b>Subject Index</b>	<b>183</b>
