PAPERBACKS

Basic Principles of
**COLLOID
SCIENCE**

D.H. Everett

Contents

Preface	v
<i>Chapter 1</i>	
What are Colloids?	1
Introduction	1
Definition of Colloids	2
Colloids and Surface Chemistry	8
Nomenclature	10
An Historical Perspective	11
An Illustrative Example: Colloidal Gold	13
<i>Chapter 2</i>	
Why are Colloidal Dispersions Stable?	
I Basic Principles	16
Introduction	16
The Meaning of 'Stability'	16
Surface Free Energy	19
Repulsive Forces: The Total Free-Energy Curve	24
Colloid Stability	25
Appendix	28

*Chapter 3***Why are Colloidal Dispersions Stable?
II Interparticle Forces** 30

Introduction	30
Intermolecular Forces	30
Interparticle Forces	33
Effect of the Intervening Medium	35
Electrostatic Forces: The Electrical Double Layer	36
'Steric Repulsion': The Effect of Adsorbed or Anchored Layers	45
Other Factors	51
The Total-Interaction Potential Curve	51
Summary	52

*Chapter 4***How are Colloidal Dispersions Prepared?** 54

Introduction	54
Dispersion Methods	54
Comminution	54
Emulsification	55
Suspension and Aerosol Methods	56
Condensation Methods: Nucleation and Particle Growth	56
Emulsion and Dispersion Polymerisation	60
Preparation of Monodisperse Colloids	61

*Chapter 5***What is the Role of Surface Chemistry?
Surface Tension and Adsorption** 63

Introduction	63
Adsorption	63
The Gibbs Adsorption Equation	67
The Influence of Adsorption on Interparticle Forces	69

The Effect of the Curvature of Surfaces on Equilibrium	72
--	----

Chapter 6

Some Important Properties of Colloids I Kinetic Properties

	76
Introduction	76
Brownian Motion	76
Diffusion	79
Osmosis	82
Donnan Equilibrium	85
Dialysis	88
Electrophoresis, Electro-osmosis, and Streaming Potentials	89
Sedimentation and Creaming	93

Chapter 7

Some Important Properties of Colloids II Scattering of Radiation

	95
Introduction	95
Light Scattering	95
Conventional Light Scattering	95
Dynamic Light Scattering	104
Neutron Scattering	108

Chapter 8

Some Important Properties of Colloids III Rheology

	110
Introduction	110
Viscosity	111
Newtonian and Non-Newtonian Systems	112
Rheology of Suspensions of Colloidal Particles	115
Spherical Particles	115
Non-Spherical Particles	121

Electroviscous Effects	123
Rheological Spectroscopy	124
Conclusion	126

Chapter 9

How are Colloidal Dispersions Destroyed? I Aggregation Processes 127

Introduction	127
Flocculation and Coagulation of Electrostatically Stabilised Dispersions	129
The Deryagin-Landau-Verwey-Overbeek (DLVO) Theory	130
Reversible Flocculation	134
Sterically Stabilised Systems	137
Bridging Flocculation	138
Depletion Flocculation	139
Kinetics of Coagulation	141
Heterocoagulation	143
Structure of Floes and Sediments	144

Chapter 10

How are Colloidal Dispersions Destroyed? II Coalescence and Particle Growth 146

Introduction	146
Sintering or Particle Coalescence	146
Particle Growth by 'Ripening'	148
Droplet Coalescence	150

Chapter 11

Association Colloids and Self-Assembly Systems 153

Introduction	153
--------------	-----

<i>Contents</i>	xiii
Micellisation	153
Mechanism of Micellisation	155
Solubilisation	166
 <i>Chapter 12</i>	
Thin Films, Foams, and Emulsions	167
Introduction	167
Surface Tension and Film Tension	167
Soap Films and Soap Bubbles	168
Film Stability	170
Film Elasticity	176
Foams	177
Foaming and Antifoaming Agents	179
Froth Flotation	180
Emulsions and Microemulsions	182
 <i>Chapter 13</i>	
Gels	185
Introduction	185
Forces Leading to Gel Formation	185
Swelling Properties of Gels	189
 <i>Chapter 14</i>	
The Industrial Importance of Colloids	191
Introduction	191
Industrial Dispersions	192
Colloids in the Energy Industries	197
Colloids in the Food Industry	200
Foams	200
Elimination of Unwanted Colloids	201

<i>Chapter 15</i>	
The Future of Colloid Science	202
Introduction	202
van der Waals Forces	202
Statistical Mechanics	203
Light Scattering	205
Neutron Scattering	205
Nuclear Magnetic Resonance	206
Rheology	207
Direct Force Measurements	207
Biological Systems	208
Conclusions	209
<i>Appendix I</i>	
Preparation of Some Simple Colloidal Systems	210
Gold Sol	210
Sulphur Sol	210
Silver Bromide Sol	210
Ferric Hydroxide Sol	211
Emulsions and Microemulsions	211
Polymer Latex	211
<i>Appendix II</i>	
Some Simple Experiments with Colloids	212
<i>Appendix III</i>	
Definitions and Measurement of Adsorption	213
The Relative Adsorption	213
Measurement of Adsorption	214
Liquid/Vapour Interface	214
Liquid/Solid Interface	215

<i>Appendix IV</i> The Gibbs Adsorption Equation	217
<i>Appendix V</i> Influence of Adsorption on Interparticle Forces	219
<i>Appendix VI</i> Steric Stabilisation	220
<i>Appendix VII</i> Further Reading	222
Subject Index	233
