Foreword	xi
Preface to Second Edition	xv
Preface to First Edition	xvii

## **The fungi as a major group of organisms 1**

The fungi	1
The classification of organisms into major groups	3
The study of fungi	5
Further reading and reference	7

## **Fungal diversity 11**

The classification of fungi and slime moulds into major groups	11
The cellular slime moulds	15
The plasmodial slime moulds ( <i>Myxomycetes</i> )	20
The <i>Oomycetes</i>	25
<i>The Saprolegniales (water moulds)</i>	26
<i>The Pythiales</i>	30
<i>The Peronosporales</i>	32
The <i>Chytridiomycetes</i>	32
<i>The Blastocladales</i>	33
<i>The Chytridiales</i>	37
<i>The anaerobic rumen fungi</i>	37
The <i>Zygomycetes</i>	38
<i>The Mucorales</i>	38
<i>Other Zygomycete orders</i>	43
The <i>Ascomycetes</i>	44
<i>The Pezizales: Pyronema, Ascobolus, morels and truffles</i>	46
<i>The Sordariales: Neurospora, Podospora, Sordaria and Chaetomium</i>	50
<i>Ophiostoma and Claviceps</i>	53
<i>The Eurotiales: Aspergillus, Penicillium and their teleomorphs</i>	54
The <i>Basidiomycetes</i>	57
<i>The Basidiomycete macrofungi – the Class Basidiomycetes</i>	57
<i>The Class Ustomycetes and Order Ustilaginales (smuts)</i>	65

# 1

# 2

<i>The Class Teliomycetes and Order Uredinales (rusts)</i>	67
<b>The mitosporic fungi</b>	<b>69</b>
<i>The Hyphomycetes</i>	69
<i>The Agonomycetes</i>	69
<i>The Coelomycetes</i>	70
<b>The yeasts</b>	<b>70</b>
<i>Ascosporogenous or Ascomycete yeasts</i>	71
<i>Basidiosporogenous or Basidiomycete yeasts</i>	75
<i>Asporogenous or anamorphic yeasts</i>	75
<b>The lichens</b>	<b>76</b>
<b>Further reading and reference</b>	<b>79</b>

# 3

## **Fungal cells and vegetative growth** **85**

<b>The structure and composition of fungal cells</b>	<b>85</b>
<i>Form and dimensions of fungal hyphae and yeast cells</i>	85
<i>The nucleus</i>	87
<i>Mitochondria and mitochondrial DNA</i>	88
<i>Hydrogenosomes</i>	90
<i>Microbodies</i>	91
<i>Plasmids</i>	92
<i>Viruses</i>	92
<i>Reserve materials</i>	94
<i>Vacuoles</i>	97
<i>The cell envelope</i>	99
<b>The growth and form of fungal cells</b>	<b>106</b>
<i>The yeast cell cycle</i>	106
<i>The cell cycle of slime moulds</i>	110
<i>The growth of hyphae</i>	110
<b>The growth of populations and colonies</b>	<b>123</b>
<i>Exponential growth</i>	123
<i>Batch culture and growth phases</i>	125
<i>Continuous flow culture</i>	130
<i>Growth of yeast populations and colonies</i>	134
<i>Growth of filamentous fungi in liquid media</i>	135
<i>Growth of filamentous fungi on agar media</i>	137
<i>Senescence</i>	144
<b>The effect of the environment on growth</b>	<b>145</b>
<i>The aeration complex</i>	145
<i>Carbon sources</i>	148
<i>Nitrogen sources</i>	151
<i>Other major nutrients</i>	154
<i>Trace elements</i>	155
<i>Growth factors and vitamins</i>	157
<i>Water availability</i>	158
<i>Hydrogen ion concentration</i>	163
<i>Temperature</i>	164
<i>Light</i>	168

<b>Vegetative multihyphal systems</b>	169
<i>Mycelial strands</i>	169
<i>Rhizomorphs</i>	171
<i>Sclerotia</i>	171
<b>The prevention of fungal growth</b>	172
<i>Sterilization</i>	174
<i>Provision of conditions unfavourable for growth</i>	174
<i>Antifungal agents</i>	175
<b>Further reading and reference</b>	180

## **Spores, dormancy and dispersal 185**

<b>The role of spores in mycology and in the life of the organism</b>	185
<i>Sporulation and taxonomy</i>	185
<i>Sporulation and developmental biology</i>	186
<i>Sporulation and reproduction</i>	186
<i>Dispersal spores and survival spores</i>	187
<b>Initiation of sporulation and sporophore maturation</b>	190
<i>Culture systems and sporulation</i>	191
<i>The effect of nutrition</i>	194
<i>The effect of light</i>	196
<i>The effect of other environmental factors</i>	203
<i>Sexual interaction in sporulation</i>	204
<b>Spore liberation</b>	212
<i>Passive launching of readily wettable spores</i>	213
<i>Passive launching of dry spores</i>	215
<i>Active launching of spores – fungus gunnery</i>	216
<i>Zoospore release</i>	219
<i>Timing of spore liberation</i>	220
<b>Spore dispersal</b>	221
<i>Dispersal through the air</i>	221
<i>Dispersal of spores by flowing water</i>	225
<i>Animal dispersal</i>	226
<i>Seed-borne fungi</i>	227
<b>Spore deposition</b>	227
<i>Deposition from air</i>	227
<i>Deposition from water</i>	229
<b>Dormancy and survival</b>	231
<i>Dormancy prior to spore liberation</i>	231
<i>Dormancy and survival following spore liberation</i>	232
<i>Spore activation: the breaking of dormancy</i>	234
<b>Spore germination</b>	237
<i>Morphological changes during germination</i>	237
<i>Metabolic changes during germination</i>	238
<i>Growth and orientation of germ-tubes</i>	239
<i>Responses to adverse conditions</i>	240
<b>Further reading and reference</b>	240

# 4

<b>5</b>	<b>Genetic variation and evolution</b>	<b>245</b>
	Fungal genetics – scope and limitations	245
	Individuals, populations and species	246
	Life cycles, mating systems and genetic exchange	248
	<i>Life cycles and the sexual process</i>	248
	<i>Mating systems and the promotion of outcrossing</i>	249
	<i>Systems restricting outcrossing</i>	252
	<i>Sexual differentiation and its relationship to outcrossing</i>	255
	<i>Heterokaryosis, the parasexual cycle and vegetative incompatibility</i>	256
	<i>The role and consequences of vegetative incompatibility</i>	260
	<i>The role and consequences of sex and outcrossing</i>	262
	<i>The survival of asexual fungi</i>	263
	Variation, microevolution and speciation	263
	<i>Variation in the laboratory and in nature</i>	263
	<i>Sources of variability in a population</i>	269
	<i>Factors bringing about microevolution in a population</i>	271
	<i>Speciation</i>	278
	Classification, identification and evolutionary trends	280
	<i>Types of classification and their role</i>	280
	<i>Features used in fungal classification and phylogeny</i>	283
	<i>Fungal identification</i>	286
	<i>The course of fungal evolution</i>	286
	Further reading and reference	291
<b>6</b>	<b>Saprotrophs and ecosystems</b>	<b>297</b>
	Features of fungi determining their roles in ecosystems	297
	<i>Substrate groups and nutritional strategies</i>	305
	Assemblages of fungi – communities and successions	319
	<i>Methods for the study of fungal communities</i>	320
	<i>Substrate successions</i>	330
	<i>Some important habitats and their fungal communities</i>	336
	Fungi in biodeterioration	351
	Environmental change and fungal conservation	354
	<i>Evidence for fungal decline</i>	354
	<i>Possible causes of fungal decline</i>	354
	<i>Conservation measures</i>	356
	Further reading and reference	356
<b>7</b>	<b>Parasites and mutualistic symbionts</b>	<b>363</b>
	Parasitism, mutualism and symbiosis	363
	Fungi and plants	363
	<i>The infection process – how fungi penetrate plant tissue</i>	364
	<i>Necrotrophic attack</i>	385
	<i>Biotrophic associations</i>	391
	<i>The host's defence against fungal parasites</i>	408

<i>Plant pathology</i>	419
<b>Fungi and animals</b>	426
<i>Fungi that attack animals</i>	426
<i>Medical mycology</i>	432
<i>Veterinary mycology</i>	443
<i>Fungi and animals that live as mutualistic symbionts</i>	444
<i>Fungi as food for animals</i>	447
<b>Mycoparasitism</b>	448
<b>Fungi and other microorganisms</b>	449
<i>Fungi as parasites and mutualistic symbionts of other microorganisms</i>	449
<i>Attack on fungi by other microorganisms</i>	451
<b>Further reading and reference</b>	452

## Fungi and biotechnology 461

<b>The economic significance of fungi</b>	461
<b>Fermentation technology</b>	462
<i>Research and laboratory activities associated with fermentation processes</i>	463
<i>Feedstocks for fermentation processes</i>	465
<i>Fermenter design and operation</i>	466
<i>Downstream processing</i>	470
<i>Solid substrate fermentations</i>	475
<b>Enzyme technology</b>	476
<i>Fungal enzymes of commercial importance</i>	476
<i>Production of fungal enzymes</i>	478
<i>Immobilized enzymes and free and immobilized cells</i>	479
<b>The production of alcoholic beverages</b>	481
<i>Beverages made from sugar-rich plant juices</i>	483
<i>Beverages made from starchy materials</i>	486
<i>Beverages made utilizing distillation</i>	489
<b>The cultivation of fungi for food</b>	492
<i>Mushrooms and other macrofungi</i>	492
<i>Edible biomass from yeasts and moulds – single cell protein</i>	496
<b>Food processing by fungi</b>	500
<i>Bread</i>	500
<i>Soya bean products</i>	502
<i>Cheese and fermented milk</i>	504
<i>Other fermented foods</i>	506
<b>The production by fungi of primary metabolites of economic importance</b>	507
<i>Industrial alcohol</i>	508
<i>Citric acid</i>	509
<i>Other primary metabolites</i>	510
<b>The production by fungi of secondary metabolites of economic importance</b>	513
<i>Secondary metabolites in medicine</i>	515
<i>Secondary metabolites in agriculture</i>	524
<b>The selection and genetic improvement of fungal strains</b>	525

# 8

<i>Sources of fungal strains</i>	525
<i>Mutation and strain selection</i>	528
<i>Genetic recombination</i>	529
<i>Gene cloning</i>	530
<b>Gene cloning and the future of fungal biotechnology</b>	<b>531</b>
<i>The production of mammalian proteins by fungi</i>	531
<i>Other applications of gene cloning in fungi</i>	538
<b>Further reading and reference</b>	<b>538</b>
<b>Appendix 1: Glossary of common mycological terms</b>	<b>543</b>
<b>Appendix 2: Classification of fungi</b>	<b>551</b>
<b>Answers to questions</b>	<b>561</b>
<b>Index</b>	<b>565</b>

Colour plates appear between pages 300 and 301.
