
Phase Transitions in Ferroelectric Phosphorous Chalcogenide Crystals

Yu. M. Vysochanskii, T. Janssen, R. Currat,
R. Folk, J. Banys, J. Grigas, V. Samulionis

Contents

Preface	9
References	12
1. GENERAL DESCRIPTION OF PHASE TRANSITIONS AND MULTICRITICAL PHENOMENA	15
1.1. Basic concepts of phase transition theory	15
1.1.1. Scalar order parameter	15
1.1.2. n – component vector order parameter	23
1.1.3. Bicritical and tetracritical points	25
1.1.4. Coupling to elastic strain	27
1.1.5. Fluctuation effects. The Gaussian model	27
1.1.6. The Ginzburg criterion	30
1.2. Triple points in phase diagrams with an incommensurate phase. Lifshitz points	37
1.3. The tricritical Lifshitz point	51
1.4. Critical behavior of uniaxial systems with dipolar interaction	56
1.5. The Lifshitz point and the tricritical Lifshitz point in uniaxial ferroelectrics	65
1.5.1. Fluctuation effect at Lifshitz points	65
1.5.2. The tricritical Lifshitz point in uniaxial ferroelectrics	72
1.5.3. Effects of defects	72
1.6. Lattice dynamics and microscopic models of structural phase transitions	74
1.7. Discrete lattice models of structural phase transitions	92
References	103
2. STRUCTURE AND PHASE DIAGRAM OF $\text{Sn}(\text{Pb})_2\text{P}_2\text{S}(\text{Se})_6$ COMPOUNDS	107
2.1. Crystalline structure	107
2.2. Shape of the phase diagrams	116
2.3. Structural modulation in the incommensurate phase	122
2.4. Domain structure of the ferroelectric phase	130
References	140
3. ANOMALIES OF THE MACROSCOPIC PARAMETERS OF $\text{Sn}_2\text{P}_2\text{S}_6$-TYPE CRYSTALS AT PHASE TRANSITIONS	143
3.1. Heat capacity	143
3.2. Thermal expansion	149
3.3. The order parameter	151

3.4. Dielectric permittivity	155
3.5. Properties at the boundary between the incommensurate and the ferroelectric phases	166
References	170
4. PHASE TRANSITION ANALYSIS IN A MEAN-FIELD APPROXIMATION FOR THE $\text{Sn}_2\text{P}_2\text{S}_6$ FAMILY OF FERROELECTRICS	173
4.1. Phase transitions in the vicinity of the Lifshitz and tricritical points	173
4.2. The incommensurate phase. Sinusoidal approximation	179
4.3. The possible influence of higher harmonics in the modulation	182
4.4. The evolution of thermodynamic function anomalies across the Lifshitz point	184
4.5. Experimental data analysis: the shape of the phase diagram	186
4.6. Temperature dependence of thermodynamic properties: comparison of observed and calculated behavior	193
4.7. Multi-level optimization of the thermodynamic analysis of the incommensurate phase properties	199
4.8. The possible role of states with subharmonics of the fundamental incommensurate wave	204
References	211
5. THE RELAXATION PHENOMENON IN PROPER UNIAXIAL FERROELECTRIC-SEMICONDUCTOR CRYSTALS $\text{Sn}_2\text{P}_2\text{S}(\text{Se})_6$ WITH INCOMMENSURATE PHASE	213
5.1. Relaxational change of phase transition character in $\text{Sn}_2\text{P}_2\text{S}_6$	213
5.2. Non-equilibrium features of the incommensurate phase of $\text{Sn}_2\text{P}_2\text{Se}_6$	223
5.3. Influence of defects and conductivity on phase transitions and domain structure in ferroelectrics-semiconductors $\text{Sn}_2\text{P}_2\text{S}(\text{Se})_6$	240
References	254
6. PECULIARITIES OF THE CRITICAL BEHAVIOR	257
6.1. Anomalies of the thermodynamic properties of uniaxial ferroelectrics	257
6.2. Critical behavior variation along the phase diagram of $\text{Sn}_2\text{P}_2(\text{Se}_x\text{S}_{1-x})_6$	261
References	282
7. INFLUENCE OF ELECTRIC FIELD AND ELECTROMAGNETIC RADIATION ON PHASE TRANSITIONS IN $\text{Sn}_2\text{P}_2(\text{Se}_x\text{S}_{1-x})_6$	284
7.1. Influence of external bias electric field on continuous phase transition	284
7.2. T-E-x diagram	286
7.3. The Lifshitz point in the temperature – radiation power diagram	290
References	295

8. PHONON SPECTRA OF $\text{Sn}_2\text{P}_2\text{S}_6$ -TYPE CRYSTALS	297
8.1. Symmetry analysis	297
8.2. Temperature variations of the Raman spectra	301
8.3. Concentrational transformation of vibrational spectra in mixed crystals	313
8.4. Influence of hydrostatic compression on the Raman spectra	320
8.5. Inelastic neutron scattering spectra	324
References	335
9. LATTICE ANHARMONICITY IN $\text{Sn}(\text{Pb})_2\text{P}_2\text{S}(\text{Se})_6$ CRYSTALS	338
9.1. Phonon-state density and thermodynamic functions	338
9.2. Thermal conduction	344
References	352
10. THE SOFT MODE PROBLEM IN $\text{Sn}_2\text{P}_2\text{S}_6$ -TYPE CRYSTALS	353
10.1. Soft optical mode and its interaction with high- and low-energy excitations in $\text{Sn}_2\text{P}_2\text{S}_6$ crystals	353
10.2. Raman spectroscopy of incommensurate phase transition in $\text{Sn}_2\text{P}_2\text{Se}_6$	368
10.3. Dielectric spectroscopy of the critical dynamics	374
10.4. Neutron spectroscopy of phonon instability in the incommensurate phase	379
10.5. Critical dynamics from hypersound and ultrasound data	391
10.6. Concentrational variation of the soft phonon Raman spectra	394
References	401
11. MANIFESTATION OF PHASE TRANSITIONS IN $\text{Sn}(\text{Pb})_2\text{P}_2\text{S}(\text{Se})_6$ CRYSTAL DYNAMICS AND KINETICS	404
11.1. Elastic anomalies	404
11.2. Thermal conduction anomalies at phase transitions	408
11.3. Mossbauer spectroscopy of phase transitions	414
References	424
12. MODELS AND MICROSCOPIC MECHANISMS OF PHASE TRANSITIONS	426
12.1. Order–disorder versus soft mode behavior of ferroelectric phase transition in $\text{Sn}_2\text{P}_2\text{S}_6$	426
12.2. Rigid-ion model calculations of the lattice dynamics	432
12.3. Lattice instability simulation	436
12.4. Models of dipole ordering in $\text{Sn}_2\text{P}_2\text{S}_6$ -like crystals	439
12.5. Causes of the incommensurate phase	443
12.6. Molecular-dynamics calculations	446
References	451
